1 What’s new in Qlik Sense June 2019?

1.1 Advanced Authoring

Copy value to clipboard

With Qlik Sense June 2019 you can now copy values to clipboard from tables. This improvement will reduce several steps and increase productivity when reusing values from a Qlik Sense application.

Grid layout on mobile devices

Qlik Sense app developers can choose the rendering layout for sheets on small screens, such as tablets and mobile phones. List view remains the default option, and only shows the visualization titles. The new Grid view shows a small preview of your visualizations, and reduces the amount of white space. This gives developers more flexibility and control over how apps designed for mobile are displayed.

Changing the small screen layout

Native container object

The container object extension was first released as part of the Dashboard bundle, and was very well received for the flexibility it adds to a Qlik Sense application sheet space. The Qlik Sense June 2019 release brings the first ever release of a native Container object, providing the existing functionality from the extension, while adding better integration capabilities with other authoring actions. This first release of the native container object will not support Qlik NPrinting, but this is planned for future releases.

With the release of the native container object, current applications using the existing extension objects will continue to work as before but the two Container Object extensions available in the Dashboard bundle will no longer be listed as new object options for applications.

1.2 Visualizations and Mapping

New charts for the Visualization Bundle

- Trellis container
  Makes small multiples of a master visualization. Great chart for showing trends across several dimensions.
- P&L pivot chart
  A pivot table with customization options for easier creation of financial reports, such as profit and loss statements.

Improved bar chart

- Labels on stacked bars.
- Improved tooltip for stacked bars now displays positive and negative totals.
- Cut bars also for stacked bars when bars go outside of the measure range.
- You can create a chart with measures only, without dimension.
- Styling options for the number of bars: auto, all or a fixed number.
- Styling options for stroke color, width and bar width.
- Toggle mini chart for all scales, not just for continuous axis.

**Exploration menu for maps**

The exploration menu for maps allows users to toggle layers and labels, adjust object size, and also change the base map image, map language, legend and zoom configuration.

**1.3 Qlik Sense Mobile**

**Push notifications to Qlik Sense Mobile**

With the June release, Qlik Sense Mobile for iOS and Android introduce support for native mobile push notifications. Administrators can push system notifications to their users from the Qlik Management Console. Notifications can be sent to all users, or to specific subsets of users, and can include a link into a dashboard. System notifications can be useful to inform users about updates to dashboard, or to announce system events.

System notifications and System notification policies features are available only on Qlik Sense Enterprise on Windows installations licensed with a signed key.

**1.4 Multi-Cloud**

The following capabilities are now available for Qlik Sense Enterprise on Cloud Services(SaaS) and Qlik Sense Enterprise on Kubernetes deployments:

- Insight advisor precedent based learning.
- Download a single Visualization as data to Excel
- Support for RedHat Openshift in Qlik Sense Enterprise on Kubernetes. This feature is not available in Qlik Sense Enterprise on Cloud Services

**1.5 Qlik Connectors**

- single sign-on (SSO) support in Windows.
1 What’s new in Qlik Sense April 2019?

1.6 Augmented Intelligence

Associative insights
Offering powerful new Augmented Intelligence (AI) insights that reveal what is hidden in your data. This feature is driven by the Qlik cognitive engine and Qlik associative engine working together.

Associative insights helps users discover and understand the significance of values in the data that are not selected. Look for Associative insights in the selections tool.

1.7 Visualizations and Mapping

We have introduced Bar & Area Chart and Bullet Chart in the Visualization Bundle, and a new capability to set default map backgrounds for improved customization.

Maps enhancements
It is now possible to set a default map background for all new map charts. Enabling further customization of backgrounds, now users can choose to set their own predefined background instead of using the Qlik standard background. This feature provides better support for handling geographic considerations such as disputed regions with politically sensitive boundaries.

In addition, you will find the following feature enhancements for mapping:

- The ability to include new lines in labels, with an improved look of labels in background maps (also added to Qlik GeoAnalytics).
- New size legends for map point layers.
- The capability to insert images in map background layers. This is suitable for simple images such drawings, floor plans, etc.

Visualization Bundle

Two new charts in the visualization bundle

- Bar & Area chart: a bar chart with transition effects, connectors and labels on tacked bars.
- Bullet chart: a bar chart ideally used for tracking towards a goal, showing target, or actual and bands for good/bad/average.

1.8 Multi-Cloud

With Qlik Sense April 2019 we have introduced a standalone SaaS deployment option for Qlik Sense Enterprise (QSE), with the ability to create, reload, and consume Qlik Sense apps entirely on Qlik’s hosted cloud. This release also enables parity between Qlik Sense Enterprise on Windows and Qlik Sense Enterprise on Kubernetes
for adding, updating, and removing themes and extensions. With Qlik Sense April 2019, all deployment options for Qlik Sense Enterprise, which includes Qlik Cloud Services (SaaS), Kubernetes, and Windows, are available independently and work together as part of a multi-cloud deployment.

The following capabilities are now available for Qlik Sense Enterprise deployed on Qlik Cloud Services (SaaS) and Kubernetes:

- Create apps
- Connect to data sources
- Store/Use QVDs/Files
- Schedule app reloads
- Team Co-development of apps
- Personal and shared spaces
- Role-based access control
- Share sheets/bookmarks

Granting access to sheets, bookmarks, and stories

- Upload/export apps
- Console for management

Management console

- License integration
- Bundled extensions
- Custom extensions (only on Qlik Sense Enterprise on Kubernetes)
- Mashups (only on Qlik Sense Enterprise on Kubernetes)
- ODAG
- API (reload only)
- Usage auditing

Events

- Link to QlikView documents (available both in Qlik Cloud Services and Qlik Sense Enterprise on Kubernetes)

1.9 Qlik Sense Mobile

Qlik Sense Mobile for BlackBerry

Qlik Sense Mobile for BlackBerry is the new Qlik Sense Mobile application built for the BlackBerry Dynamics EMM platform, supporting advanced management and security for BYOD (bring your own device) environments. It allows BlackBerry Dynamics EMM users to access Qlik Sense in a containerized mobile app, with end to end secure communication, including SSO and at-rest encryption. Qlik Sense Mobile for BlackBerry enables administrators to govern Qlik Sense Mobile deployments across the organization by setting specific policies and managing app distribution.

Qlik Sense Mobile for BlackBerry
1.10 Qlik Connectors

- Support for Enterprise Data Sources in a SaaS environment with ODBC Drivers in Qlik Cloud Services and Multi-Cloud environments.
- Extended connectivity reload capabilities with Basis Scheduled reloads for Enterprise SaaS.
1 What’s new in Qlik Sense February 2019?

1.11 Usability Improvements

Single page application flow

Qlik Sense now has a single page application flow. You can move between Data, Analysis, and Story spaces without reloading the page. This creates fluid and natural navigation for end users and developers, with fewer clicks and faster time to insights.

1.12 Advanced Authoring

Dollar-sign expansion preview

The expression editor now provides a way to evaluate the results of calculations with dollar-sign expansions. Developers who use variables can see how these work in the context of an entire expression. This reduces the chances of having the wrong syntax in nested expressions.

1.13 Visualizations and Mapping

Visualization Bundle

Visualization bundle is a set of new charts:

- Funnel chart: shows progression of a measure through stages.
- Sankey chart: displays a measure as flow, and how the measure is divided into different categories in one or more stages.
- Radar chart: shows a measure spread on polar chart with two category dimensions, one for the axes and one for areas.
- Heat map chart: shows a matrix of color values with two dimensions and a measure.
- Multi KPI: shows measures with more options and customizations than the standard KPI object.
- Word cloud chart: highlights the most common occurrences in a text dimension.
- Network chart: visualizes a graph with dimensions for nodes and parents and measures for link values.

Dashboard Bundle

One extension added to the existing bundle:

- Share button: creates sharable app links with current sheet and selection.
Support for WMS in map background layers

Map charts can now use maps from third-party WMS servers as background layers. WMS background layers are added through a wizard interface, making configuring the WMS background easy.

1.14  Qlik Sense Mobile

- The Qlik Sense Mobile app is now available for devices running Android OS, allowing to consume Qlik Sense apps online.
- You can now open and consume Qlik Sense mashups using the Qlik Sense Mobile app.
- Microsoft Intune EMM solution is now supported for accessing Qlik Sense Enterprise from a mobile device.

1.15  Qlik Connectors

Integrated Single Sign On Support (SSO)

Three drivers in the Qlik ODBC Connector Package now have beta-level support for single sign-on (SSO) (MS SQL Server, Apache Hive and Cloudera Impala).
1 What’s new in Qlik Sense November 2018?

1.1 Advancements to Augmented intelligence

Precedent based learning
The time has come for us to unveil Qlik Sense November 2018. We are introducing Machine Learning with precedent/application learning capabilities, leveraging information from users’ interactions with the product to feed the cognitive engine for smarter insights and results.

Insight advisor light authoring
Users can now do light authoring with insight advisor. This capability lets users change the suggested visualizations and analytics offered by the cognitive engine, giving greater flexibility and control when discovering insights.

1.2 New advanced authoring features

Alternate states
We have exposed the alternate states functionality that was previously only available through API calls. Alternate states let you create visualizations for comparative analysis based on a state other than the default selection state. Alternate states are a new type of master item, and once created, they can be applied on sheets or visualization objects using the new alternate state option, located under Appearance. With this feature, you can make different selections on the same dimension and compare them in a single visualization, or in two or more visualizations side by side. You can also an alternate state to an expression, using set analysis. This allows for complex comparative analysis.

Exposed set analysis
This feature makes it easier for developers to create expressions with the correct set analysis syntax.

Set expression improvements
Set expression in the expression editor dialog has been improved.

Single selection in fields
This capability supports guided analytics use cases in which a single selection will change the analysis flow. The new Qlik Sense field settings allow developers to enable the "always one selected value" for a particular field. The ability to always have one selected value can be used in applications that require better control for conditions in expressions, localization requirements, and other guided analytics use cases.

Fully supported Dashboard Extension bundle [#1]
Qlik Sense November 2018 is introducing extension bundling. This Dashboard extension bundle can be installed alongside Qlik Sense and are fully supported by Qlik. Users can choose to opt out of this bundle option. The objects included in this bundle were previously available as popular extensions on Qlik Branch. Now as part of
What’s new in Qlik Sense November 2018?

the Qlik offering, Qlik will maintain and ensure the quality and performance of these objects upon version upgrades. These extension objects are fully functional, but do not maintain other product standards such as accessibility, multi-language, and RTL.

The Dashboard bundle includes:

- Date range picker: allows users to quickly and easily select dates and ranges.
- Navigation button: lets users quickly navigate to sheets, stories, and websites. Can also trigger actions like selections and set variables.
- On-Demand reporting: generation of Qlik NPrinting reports is now possible from inside apps.
- Tabbed container: ability to switch between visualizations with tabs.
- Show/hide container: similar to tabbed containers, but now with show conditions.
- Variable input: users can set values with buttons, drop-downs, sliders, and input boxes.

Dashboard bundle

1.3 New ways to collaborate

Sharable Qlik Sense chart links

You can now share chart links with custom selection states. This means you can share initial insights and gather further analysis quickly.

This feature is currently available only in Qlik Cloud Services and Qlik Sense Enterprise for elastic deployments.

1.4 Advancements in Visualizations and Mapping

New map chart layer

A new map chart layer is now available for displaying pie or bar charts on top of a map to illustrate distribution of values of multiples types.

Improved pie chart

Pie charts now support a second measure to display multiple values in the outer radius. This visualization is also known as rose chart.

Outline opacity setting

Outline opacity setting can now be applied with a slider for increased readability, particularity with small features.

Further advancements in tile map services

Further advancements in tile map services, such as Bing Maps, are now supported by the map chart background layer.
1.5 Improved Management

Import Export App enhancements

Import Export App enhancements gives you the ability to import and export apps with or without data out of the QMC.

Multi-Cloud Developments

Qlik’s multi-cloud offering now offers simplified configuration options using self-signed JSON Web Tokens (JWTs). This means components can be connected without requiring specific features of an IdP. In addition, Qlik Cloud Services can now integrate with ADFS as the identify providers allowing customers with Active Directory infrastructure to authenticate their users.

1.6 Accessibility

Accessible list boxes, keyboard navigation, and screen reader capabilities for list box access.
2 What’s new in Qlik Sense September 2018?

2.1 Augmented intelligence

Insight advisor
The insight advisor has been extended to all users of Qlik Sense apps, including consumers of published apps. Users can search and generate insights on master items.

2.2 Advanced authoring

Improvements to sheet control
- You have improved control over Qlik Sense when using devices that support touch and mouse input events.
- App developers can set a default bookmark for an app. The selections are applied when the app is opened.

App customization
App developers can disable responsive layout for sheets and set a custom size in pixels. Your dashboard will be presented to users exactly as you create it. This feature is not supported in mobile device mode.

Expression editor enhancements
- Direct links are provided to the Qlik Sense help page from expression functions.
- Improved categorization of functions.
- Improved search makes it easier to find field names, functions and variables.

Better control in visualizations
- You can show or hide columns in a pivot table based on a formula.
- You can customize master measure items with color scales or gradients. This is a convenient alternative to custom color expressions.

2.3 Visualizations and mapping

New map layer
Density layer is a multi-color gradient map background where the color intensity depends on the weight and closeness of points. This layer is useful, for example, for mapping data such as crime statistics and house values on a neighborhood level.
What’s new in Qlik Sense September 2018?

Map improvements

- Adaptive pixel zoom and pan to optimize performance when browsing dense maps.
- Default colors for added layers. Each new layer has an independent color picked from palette.
- KML files with geographic line data can now be loaded and rendered.
- Field labels for size and width make legends and pop-ups easier to read.

2.4 Management

Improvements to back end work flow

Multiple apps can be moved between streams in the QMC. This builds on the functionality released in the Qlik Sense Enterprise April 2018, where single apps could be moved between streams.

Open source front end framework upgraded to version 1.6.9, which provides better stability and compatibility.

2.5 Mobile

Access to Qlik Sense Enterprise is now supported in AirWatch EMM (Enterprise Mobile Management) environments using the Safari, Chrome or VMware browser.

2.6 Qlik connectors

We continue to expand connectivity options.

- Native connectivity added to MS Azure QSL DB, with tested and supported integration.
- The JIRA connector is released to GA from beta.

Enhanced security for LDAP authentication, which is built into the Qlik ODBC Connector. This improves customer experience and time to value, with industry recognized encryption and authentication standards.
What’s new in Qlik Sense June 2018?

3.1 Create, Discover, Collaborate

Insight advisor
Insight advisor is an AI capability that suggests the most relevant insights and visualizations for users to consider and explore. Insight advisor is powered by Qlik cognitive engine, which auto-generates and prioritizes relevant insights and analytics based on Qlik’s proprietary algorithms. Creators of apps can use Insight advisor to find insights in the data they load into Qlik Sense and evaluate these insights for the overall data set, dimensions in the data, or search criteria to target specific areas. Insights are contextually aware and work with Qlik’s associative engine.

Accelerated self-service
- Alternative chart suggestions: Qlik Cognitive engine now provides a number of alternative charts in the property panel to complement the initial recommendation.
- Switch dimensions and measures: you can now switch dimensions and measures in the property panel with a simple drag and drop.
- You can now quickly change between common aggregation methods using a drop-down menu in the property panel.

Advanced authoring
- Qlik Sense sheets can now be extended vertically to a scrollable mode.
- Grid size can now be changed in sheets with existing objects.

New capabilities in the Expression Editor
Qlik Sense Expression editor now has improved usability:
- **Fields**: create statistical aggregation functions based on field data. Two check boxes allow you to independently insert Distinct and Total clauses in statistical aggregation functions.
- **Functions**: use this control to enter general Qlik Sense functions into an expression.
- **Variables**: use this control to insert variables into an expression. When a variable is selected, a preview of its definition and value appears.

Filtering data from files
With Qlik Sense June 2018 you can create filtering conditions for the field content in your files. These filters are automatically applied into the script when loading data in Data manager.

Visualizations and mapping
- Line layers are now available in the multi-layer map chart.
- You can now show and hide specific columns in a straight table using expression conditions.
- The mini graph used for scrolling can now be turned off for line charts, bar charts, and combo charts.
3 What’s new in Qlik Sense June 2018?

Improved app management from the hub

Qlik Sense June 2018 brings new and improved capabilities to how you manage apps from the hub:

- You can now republish an app that you have already published, from the hub. Create a duplicate of your published app first, make your changes, and then republish it back to the same stream as the published app. The stream will be automatically selected from the system based on the app name.
- A new dedicated section for published apps has been added to the hub. Within this section you can still create an app duplicate and then use the new Republishing an app from the hub capability to publish your changes back to your users.
- The app owner can now approve community sheets of a published app and add them to the list of base sheets. The app owner can also decide to unapprove base sheets to the Community section.

Accessibility

To further improve Qlik Sense accessibility, the following features have been implemented:

- Screen reader tags
- Keyboard navigation for tables
- Flip from chart to table for value inspection and selection

Accessible Qlik Help site

The following accessibility improvements have been implemented for the entire Qlik Help site, help.qlik.com:

- Users can now navigate and interact with the help site using keyboard keys and shortcuts.
- UI elements, text, search on, and images support zooming, resizing and screen magnifiers.
- Text, icons and images are compliant with accessibility standards for contrast and readability.

3.2 Deploy and Administer

Multi-Cloud

With Qlik Sense June 2018, you can distribute apps developed in Qlik Sense Enterprise on Windows to Qlik Cloud Services and Qlik Sense Enterprise for elastic deployments. Apps are consumed in the new cloud hub. Qlik Sense Enterprise on Windows and the cloud environment are managed using a single license and sign-on.

For an appropriate license and detailed information, please contact your Qlik representative or Qlik Support.

3.3 Mobile

Support for BlackBerry Access browser.

With Qlik Sense June 2018, you can now access Qlik Sense and consume apps from a mobile device that uses a BlackBerry Access browser. A BlackBerry Dynamics deployment must be set up by an administrator for your users. For information about how to set up and use BlackBerry Access to connect to Qlik Sense, see the support article Connecting to Qlik Sense using BlackBerry Access.
3.4 Qlik Connectors

With Qlik Sense June 2018, five new connectors have been added to the ODBC connectors package. All connectors listed here are updated to the latest version of OpenSSL.

- Presto: the PrestoDB Connector enables you to create connections that query all the data sources in an environment that have been configured with Presto.

The following connectors are available in beta version:

- Apache Drill: the Apache Drill Connector provides access to non-relational data stores.
- Apache Phoenix: the Apache Phoenix Connector provides access to relational data stores.
- Apache Spark: the Apache Spark Connector is used for direct SQL and HiveQL access to Apache Hadoop/Spark distributions.
- MongoDB: the MongoDB Connector gives access to MongoDB, which is a NoSQL database program.
4 What’s new in Qlik Sense April 2018?

4.1 Create, Discover, Collaborate

Assisted data visualization with Qlik Sense chart suggestions

Qlik Sense chart suggestions make it easier to create a visualization by allowing you to simply drag and drop fields onto your sheets. Chart suggestions are created using the Cognitive Engine in Qlik, which leverages insights from the data loaded and combines them with best practices for data visualization.

Publishing an app from the hub

In Qlik Sense April 2018 you can publish an app that you have created to any stream for which you have publish access. If you have published an app to a stream, you can move your app between the streams for which you have permission to publish.

Improvements based on customers feedback

Qlik Sense April 2018 introduces a number of improvements based on customer feedback:

- Grid size of an app sheet can now be customized with three different sizes: small, medium or large.
- You can now set custom abbreviations in the load script. For example, you can choose to use Billions instead of G.
- When clicking the Edit button of a linked visualization, a new shortcut redirects you to editing the Master visualization item.
- New keyboard shortcuts for selection back/forward have been added.

Maps visualizations improvements

Qlik Sense April 2018 features significant improvements to the built-in maps visualization:

- Support for multiple layers.
- Labels for point layers and area layers.
- Quick look up of countries, divisions, cities, postal code areas.
- Higher fixed upper limit of number of objects.
- Circle select with distance measure.
- Drill down support.
- Layer control, zoom limit and draw order.
- English or local name in the background map.

Keyboard navigation support for Qlik Sense hub

To improve accessibility, Qlik Sense hub now supports keyboard navigation and shortcuts.

Linking Qlik Sense Mobile to third-party applications

Qlik Sense Mobile can now interact with third party mobile applications through a custom generated URL (deep link). The link can be embedded within the third party mobile application, with appropriate selections and filters. Clicking the link opens the app in Qlik Sense Mobile with the filters and selections that were applied during...
What's new in Qlik Sense April 2018?

original presentation. As a result, user experience is improved and context is provided when interacting with the app.

4.2 Deploy

Deployment improvement
From Qlik Sense April 2018 it is no longer necessary to use port 4244 as the authentication port. If you are using SSL to protect your environment, you can use port 443 as an external facing port for the Qlik Sense Proxy service (QPS).

Per-app VPN mode for Qlik Sense Mobile
Qlik Sense Mobile now works in a per-app VPN mode with the appropriate VMware Workspace ONE tunnel components. This helps secure network traffic between Qlik Sense Mobile and Qlik Sense Enterprise deployed behind a corporate firewall. With this addition, it is no longer necessary for device network traffic to go through a VPN. Only Qlik Sense Mobile apps are routed through the VPN, reducing load on the VPN server.

4.3 Administer

Allocations for new license types
Customers who have purchased Qlik Sense with support for the new Professional and Analyzer license types can now configure the allocation of these licenses in the QMC.

Analytic connections improvement
With Qlik Sense April 2018, Qlik Sense Enterprise administrators now have the ability to add, remove, and reconfigure Analytic connections without additional restarts of any service becoming required for the Analytic connections to function. Administrators now can also stop and start any services in any order without impacting the Analytic connection functionality. Advanced Qlik Sense Desktop users can now develop and use Analytic connections even when the SSE server implementing the Analytic connection is started after the Qlik associative engine.

Enable anonymous users to export data
From Qlik Sense April 2018 anonymous users can print and export data.
What’s new in Qlik Sense February 2018?

5.1 Create, Discover, Collaborate

Dynamically generated queries to web sources in scripts
You can now generate the URL dynamically before retrieving data using the webfile connector in the data load script. This opens up a range of new possibilities for querying web hosted files.

Loading files from web resources

Loading a table from an analytic connection
You can now return a full table in a single request to an analytic connection from the data load script, using the new Extension clause of Load. This improves performance drastically when loading data from an analytic connection during data reload.

Load

Simplify data preparation with recommended associations
You can now use recommended associations to see possible associations between tables. This facilitates experimentation before applying changes to the data model.

Managing data associations

Styling an app with custom themes
You can now use custom themes to style an app on a global or granular basis:

- Change colors of background and individual chart elements.
- Define color palettes and color gradients.
- Specify font sizes and font color.

Styling an app

On-demand App Generation
You can now create On-demand App Generation (ODAG) solutions with support for anonymous usage. This adds capabilities for external facing websites and OEM scenarios.

Managing big data with on-demand apps

Qlik Sense Mobile
You can now use Qlik Sense Mobile on your iPhone. The app features the full QIX engine that delivers Qlik’s patented associative technology on all supported Apple mobile devices online and offline.

Qlik Sense Mobile app

Updated ODBC connectors
The Qlik ODBC Connector Package includes updated connectors:
What’s new in Qlik Sense February 2018?

- Oracle
  - Oracle
- PostgreSQL
  - PostgreSQL

5.2  Deploy, Administer

SSO with Microsoft SQL Server

You can now create a single connection to Microsoft SQL Server that can be shared across a number of different users. Each user is only able to see tables and values in SQL Server as defined by the database security rules.

[Configuring single sign (SSO) with Microsoft SQL Server (MS SQL Server)](link)
6 What’s new in Qlik Sense November 2017?

6.1 Create, Discover, Collaborate

Keyboard navigation in Qlik Sense apps
You can now navigate using your keyboard in Qlik Sense apps. Keyboard navigation is supported both within the app overview page and within the Qlik Sense toolbar.

Details dialog in Data manager
You can now view the operations and transformations performed on tables and fields using the Details dialog. Details displays the current operations and transformations made to the selected table or field, in the order they are applied in the generated data load script. This enables you to easily see the source of a table or field, the current changes that have been made, and the sequence in which the changes have been applied.

Add data manually
You can now manually enter data in Add data in Data manager. Manual entry in Add data enables you to enter data into a table editor and then add it as a table in Data manager.

Additional functions for calculated fields
Additional functions are now available when you are created calculated fields in Data manager.

New ODBC connectors
The Qlik ODBC Connector Package includes two new connectors: Amazon Redshift and Google BigQuery.

6.2 Deploy, Administer

SAML single logout
With SAML single sign-on (SSO), you only have to log in once to access several web sites. There is then a potential risk that one or more sessions are not properly closed. By using SAML single logout you eliminate that risk.
7 What’s new in Qlik Sense September 2017?

7.1 Create, Discover, Collaborate

Sequential operations in Data manager

Improvements to Data manager enable you to perform sequential transformations on your tables and fields. Where previously you were limited in what transformations you could perform together, such as being able to apply a single data profiling card transformation on a single field, you can now use the data profiling cards, concatenation, calculated fields, and unpivoting data together.

Managing data in the app with Data manager

Recent colors in color picker

The color picker in Qlik Sense now displays the five most recent colors selected in Qlik Sense.

Navigation and usability improvements to Data manager

Enhancements have been made to Data manager to improve the user experience, including repositioning and restyling the Add data buttons and redesigning the app overview page when no data is loaded.

New visualization: Waterfall chart

You can now illustrate how an initial value is affected by intermediate positive and negative value with the new waterfall chart. For example, you can show the positive and negative contributions of different accounts in an income statement.

Ease-of-use enhancements to on-demand apps

Users now have access to more information and have more control over generated on-demand apps. The navigation point panel now displays the number of rows selected and constraints on individual fields and the selection status related to each constraint. Users also have control over the naming of generated on-demand apps, and they can reload and regenerate on-demand apps based on current selections. They can also copy and regenerate an on-demand app to preserve its current state while creating a version of the app with new selections.

7.2 Deploy, Administer

Qlik Sense Mobile app

The Qlik Sense Mobile app allows you to securely connect to your Qlik Sense Enterprise deployment from your supported mobile device. The Qlik Sense Mobile app can be deployed and managed using either Enterprise Mobile Management (EMM) software, or Apple Developer Enterprise Program tools.

You can download the new Qlik Sense Mobile app to your supported iOS device, and then connect to a Qlik Sense Enterprise server. You can download Qlik Sense apps, and then view those apps when you are not connected to a server.
Centralized logging

With the introduction of shared persistence, all nodes now have direct access to a common database and file system. The Qlik Logging Service centralizes the logging by collecting all the messages and inserting them into a PostgreSQL database. This feature is optional but is enabled by default.
What’s new in Qlik Sense June 2017?

Create, Discover, Collaborate

On-demand apps
On-demand apps enable you to load and analyze very large volumes of data, so-called big data. On-demand apps provide aggregate views of big data stores and allow you to identify relevant subsets of the data to load for detailed analysis. On-demand apps are created from specially designed selection apps and template apps.

Managing big data with on-demand apps

New visualizations
You can now use these additional chart types to visualize distribution and range of your data.

- The box plot is suitable for comparing range and distribution for groups of numerical data. Data is visualized by a box with whiskers, and a center line in the middle.
- The distribution plot is suitable for comparing range and distribution for groups of numerical data. Data is plotted as value points along an axis.
- The histogram is suitable for visualizing distribution of numerical data over a continuous interval, or a certain time period. The data is divided into bins.

Synchronizing scripted tables in Data manager
You can now synchronize your scripted tables in Data manager, enabling you to use the tools available in Data manager with your scripted tables.

Synchronizing scripted tables in Data manager

Data profiling cards
You can now view summaries of table field data and transform that data in Data manager using the data profiling cards.

- The Summary card enables you to view a summary of data in a table’s field. In addition, the Summary card enables you to view different possible data interpretations, such as viewing the field’s data as a dimension or measure, enabling different potential transformation options.
- The Replace card enables you to select one or more values from a field and replace them with another value.
- The Set nulls card enables you to select values from a table field and then manually set them as null.
- The Order card enables you to apply a custom order to values in a dimension field.
- The Split card enables you to split content from a field into multiple fields.
- The Bucket card enables the grouping of measure field data into ranges, creating a new field with the specified groupings.
Concatenation in **Data manager**
You can now manually concatenate tables in **Data manager**.

Colors and dimensions
You can now assign colors to master dimensions, ensure that the same colors are used for your dimensions across visualizations.

You can also now assign individual colors to a dimension’s values, ensuring that individual values are colored consistently across visualizations when coloring by dimension.

### 8.2 Administer

**Single sign-on to Cloudera Impala**
You can now set up SSO connections to Cloudera Impala.

You set up single sign-on by establishing a trusted connection to Cloudera Impala, and then setting the ODBC connection to use the Qlik Sense credentials.

**Three new Monitoring apps**
To scale with deployment size and expanding log history, and to meet greater needs for Qlik Sense monitoring, the Monitoring apps have been refactored into three new smaller, more specialized apps.

**Analytic connections**
With the analytic connections you can configure a server side extension to extend the Qlik Sense expression library and support calls to third-party engines.

### 8.3 History

This PDF contains all the news and updates since the first release of Qlik Sense.

[News since Qlik Sense 1.0](#)
What’s new in Qlik Sense 3.2?

9.1 Create, Discover, Collaborate

Calendar measures
You can now create calendar measures to analyze data over relative time ranges. For example, you can use calendar measures to compare year-to-date sales figures with figures from the same period the previous year.

Colors and measures
You can select colors for charts based on measures. You can also specify a single color from a full color palette.

9.2 Deploy

Shared persistence
You can now deploy a multi-node site with shared persistence. This means that nodes share a single repository database and a single network folder for the application files. You can either share the central node repository, or set up a high availability database cluster as the repository database. This allows for higher volumes of changes, such as reloads, and removes delays caused by synchronization.

9.3 Administer

Desktop authentication
Qlik Sense Desktop users can now authenticate against their Qlik Sense Enterprise server. The Qlik Sense Enterprise administrator configures an authentication link in the Qlik Management Console, and distributes it to users.

- Starting Qlik Sense Desktop
- Configuring Qlik Sense Desktop authentication

QlikView converter
The QlikView converter simplifies the work associated with converting elements from a QlikView document into master items in a Qlik Sense app. Visualizations, expressions, dimensions, and variables can be selected for conversion. The tool is available from the Dev Hub.
10.1 Create, Discover, Collaborate

City and country recognition when loading data
Geographical data (points and area polygons) are now created automatically when you load data containing names of recognized cities and countries. This enables you to quickly create a map visualization of your data without loading geographical data separately.

Scroll alignment
You can now set the position of the chart scroll bar to start at the end of the data.

Default app theme
You can now change the default app theme. The new Qlik - Standard theme adjusts the padding and spacing around objects as well as provides designated spaces for titles. New and existing apps use the Qlik - Classic theme by default.

Drag and drop coloring
You can now drag and drop any field, dimension, or measure from the assets panel onto a visualization to change the color.

Navigation
You can now choose to show or hide the navigation menu in the hub.

Search Qlik DataMarket
Qlik DataMarket now includes a search facility that allows users to search for terms and phrases in DataMarket’s packages, categories, and data sets.

Salesforce Connector supports primary key chunking
The Qlik Salesforce Connector now supports primary key (PK) chunking when data is loaded in Bulk mode.

Filtering data in the database connectors
The database connectors in the Qlik ODBC Connectors Package installed with Qlik Sense allow subsets of data to be selected by filtering for specific data in database records.

10.2 Administer

Qlik Management Console
The QMC now has an engine setting: Create search index during reload, which improves the first search experience for a user.
11  What’s new in Qlik Sense 3.0?

11.1  Create, Discover, Collaborate

Qlik connectors installed with Qlik Sense

Qlik connectors that previously had to be installed separately are now installed automatically with Qlik Sense.

- The Qlik REST Connector 1.1 enables Qlik Sense to efficiently load data into a Qlik Sense app from a REST data source. The QlikREST Connector is a generic connector. That is, it is not tailored to a specific REST data source.
- The Qlik Salesforce Connector 14.0 enables Qlik Sense to efficiently load data into a Qlik Sense app from a Salesforce.com data set. Salesforce.com data is available to users with a Salesforce.com account and current access credentials.
- The Qlik database connectors in the ODBC Connectors Package 1.1 enable Qlik Sense to efficiently load data into a Qlik Sense app from databases accessed through supported ODBC (Open Database Connectivity) drivers. When using one of the database connectors in the Qlik ODBC Connectors Package, you do not need to create a DSN connection before connecting to the ODBC database.

Managing table associations in Data manager

The Associations view in Data manager has a new and improved user interface, with bubbles representing the tables in the data model. You can associate your data more easily according to recommendations.

Managing data associations

Single sign-on to SAP HANA

You can now set up SSO connections to SAP HANA.

You set up single sign-on by establishing a trusted connection to SAP HANA, and then setting the ODBC connection to use the Qlik Sense credentials.

New Qlik DataMarket packages

Qlik DataMarket provides new premium data packages:

- Historical stock prices from major stock exchanges
- Financial data from companies worldwide
- Population indicators for India’s states and districts
- Population of Canada by provinces or territories

New multiple-table structure for Qlik DataMarket data sets

A multiple-table structure increases the efficiency with which data is loaded, and it can improve the data associations.

When data is loaded from a Qlik DataMarket data set, it is allocated to multiple individual tables. These tables are associated by generated key fields. Measures and time periods from the data set are consolidated in one table that is assigned the name of the data set. Dimension fields are allocated to individual tables.
What’s new in Qlik Sense 3.0?

Making associations in Qlik DataMarket

Publishing apps
You can now publish your apps from Qlik Sense. In previous versions, you could only publish of apps from the Qlik Management Console.

Publishing an app

New language support
Qlik Sense is now available in four new languages: Polish, Turkish, Korean and Traditional Chinese.
Apps now support bidirectional reading order, for languages such as Arabic and Hebrew.

App styling
You can now apply styling to your app to customize the app based on your company standards.

Smart search now includes visual search
You can now search visualizations as well as data items. Search results are returned as a gallery of visualizations in which the search terms are found. Click on a visualization to go directly to the sheet it comes from.

Enhance your apps with widgets
To enhance the appearance and behavior of your apps, you can now create and use a new type of custom object, the widget. Libraries of widgets appear in the assets panel alongside visualization extensions. Widgets are simpler than visualization extensions to build. Typically, widgets are customized KPI objects, simple chart-style visualizations, tables, and sheet navigation objects.

Time-aware charts
You can now use a continuous scale on the x-axis in a line chart to get an accurate view of time-based data.

Shared content in the Qlik Sense hub
QlikView documents can now be shared from QlikView to the Qlik Sense hub.
Qlik NPrinting reports can now be distributed to the Qlik Sense hub.

Additional changes
Geopoints, which you use in map visualizations, can be created automatically from latitude and longitude data.
You can now open a dialog with user information from the hub.
You can add and attach multiple data files to your app in one go, using drag and drop.

11.2 Deploy

IPv6
Qlik Sense now supports IPv6.

Qlik Deployment Console
The Qlik Deployment Console (QDC) is not supported in Qlik Sense 3.1.
11.3 Administer

Monitoring apps in QMC updated

The Monitoring apps now include alternative dimensions and measures for increased customization.

The Operations Monitor app includes basic metadata about users, tasks, apps, and app objects.

The License Monitor app reports token usage compared with allocated and available tokens and shows token usage by stream in addition to app. Basic metadata about users and apps is also available in the app.
12 What’s new in Qlik Sense 2.2?

12.1 Create, Discover, Collaborate

Data manager
The data manager user interface is improved, and several features have been added:

- You can now split tables that have been concatenated.
- You can rename tables and fields.
- You can add calculated fields to a table. A calculated field uses an expression to define the result of the field. You can use functions, fields, and operators in the expression.
- You can change the display format of date and timestamp fields.
- Fields containing dates and timestamps are expanded with date attributes that you can use in visualizations and expressions.

Alternative dimensions and measures
You can now add alternative dimensions and measures to some visualizations, using the property panel. The alternative dimensions and measures are then easily accessible and you can quickly change the data in your visualization. The visual exploration menu (available while analyzing visualizations) also supports this.

Export data from pivot tables and other charts
You can now export data from pivot tables, stacked bar and line charts, and treemaps.

Qlik DataMarket
New DataMarket packages are available for global weather, currencies, and stock markets.

The interface for selecting data has been improved.

- Licensed and free data sets are separated into clearly marked categories.
- Hierarchical data sets are structured to facilitate selection.

Data storytelling
Data storytelling has been improved.

- You can now take a snapshot of a visualization when you hover over the visualization.
- You can now choose to create an annotation when you take a snapshot of a visualization. The annotation is displayed in the snapshot library and helps you to distinguish between your snapshots.
- When you add a snapshot to a story slide, the snapshot now snaps to grid.
- When you play a story, a tool tip now appears when you hover over data points.

12.2 Deploy

Qlik Sense Proxy Service metrics
A new metric, PrintingLoadBalancingDecisions, is available for the Qlik Sense Proxy Service (QPS).
Qlik Sense Printing Service logging
The folders and files used by the Qlik Sense Printing Service (QPR) for logging have been updated.

Qlik Deployment Console system requirements
Microsoft Windows 10 is now a supported operating system for the Qlik Deployment Console (QDC).

Cloning sites
The Qlik Deployment Console (QDC) can be used to clone entire Qlik Sense sites.

Qlik Sense setup files stored in the S3 bucket
The Amazon Web Services (AWS) plug-in uses Amazon Simple Storage Service (S3) to cache the Qlik Sense setup files, so that they do not have to be loaded for each new site or node.

12.3 Administer

New license option
The capacity-based license gives you the flexibility to configure the number of cores to use on a CPU.

Limit resource consumption by apps
The Qlik Sense Engine Service now includes settings for limiting the amount of resources (memory or time) that can be consumed by apps.

Redesign of the audit page in the Qlik Management Console
The audit overview page has an enhanced table of rules for security, sync, and license.

Operations Monitor app in QMC updated
The Operations Monitor app now incorporates the newly added Printing (Export) logging. A new Export Overview sheet is included in the app.
What’s new in Qlik Sense 2.1?

Here are the highlights of the new and updated features in Qlik Sense 2.1:

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attach data files</td>
<td>You can now upload and attach data files to an app on a server.</td>
</tr>
<tr>
<td>Variables overview</td>
<td>You can now get an overview of all the variables in an unpublished app, and create, edit, and delete variables.</td>
</tr>
<tr>
<td>Media library</td>
<td>You can view all images in an app, and upload new images.</td>
</tr>
<tr>
<td>Visual exploration</td>
<td>You can now edit some visualization properties through the new exploration menu.</td>
</tr>
<tr>
<td>Editable range selection</td>
<td>It is now possible to input exact values and do more precise selections.</td>
</tr>
<tr>
<td>Exporting a story</td>
<td>A story can be exported as a PowerPoint presentation.</td>
</tr>
<tr>
<td>Repository Snapshot Manager</td>
<td>The Repository Snapshot Manager (RSM) can be used to automate the backup and restore procedures.</td>
</tr>
</tbody>
</table>

13.1 Create

Managing data

Attach data files
You can now upload data files to an app on a server. The file is attached to the app, and you can load and select data to use in the app.

Creating apps and visualizations

Variables overview
In the variables overview, you can now get an overview of all variables in an unpublished app. From the overview, you can create, edit, and delete variables.

Auto-complete and color coding in the expression editor
When typing in the expression editor, you now get an auto-complete list of matching fields, variables, and functions to select from. The added color coding helps you to see where fields, variables, and functions are used in the expression.

Managing images

Media library
You can now find all the images you can use in the app in the media library.

Upload image
You can now upload images to the media library.
13.2 Discover

Interacting with visualizations

**Visual exploration**
The new exploration menu makes it possible to change some properties while analyzing. The menu is accessible when viewing a visualization in full-screen mode. It is available for line chart, bar chart, pie chart, and scatter plot. It is a simplified version of the properties panel, with the purpose of making data exploration faster and more easily accessible.

**Editable range selection**
It is now possible to input exact values and make more precise selections.

13.3 Collaborate

Data storytelling

**Exporting a story**
A story can be exported as a PowerPoint presentation.

13.4 Deploy

Planning Qlik Sense deployments

**Backing up and restoring a site**
The Repository Snapshot Manager (RSM) can be used to automate the backup and restore procedures.

Deploying Qlik Sense sites in cloud computing environments

**Qlik Deployment Console system requirements**
Added Microsoft Windows 10 as a supported platform.

13.5 Administer

Monitoring a Qlik Sense site

- The Monitoring apps now handle incomplete or malformed logs without failing during reload.
- The Monitoring apps now generate simple logs for tracking their own reload history.
- The QMC change history contains a more complete and detailed list of changes tracked by the Monitoring apps.
- The *Operations Monitor's Errors and Warnings* table is updated to allow more timely access to other log entries associated with an error or warning.
- The *Operations Monitor* reports aborted reload tasks as well as successful and failed reloads.
The Operations Monitor library includes two new heat map visualizations that can be used on customized sheets for performance monitoring.
14 What’s new in Qlik Sense 2.0?

Here are the highlights of the new and updated features in Qlik Sense 2.0:

<table>
<thead>
<tr>
<th>Qlik DataMarket</th>
<th>The DataMarket service enables you to add data from external sources from directly within Qlik Sense. Data from a wide range of frequently-updated sources is available.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data manager</td>
<td>A new tool for smart loading of data. The data manager uses a new, visual data profiling and modeling capability to make it easier to integrate data from multiple sources without the need to learn a scripting language.</td>
</tr>
<tr>
<td>App creation and visualization enhancements</td>
<td>Enhancements and improvements to visualizations include: improved map functionality and map data usage; smoother use of dimensions in pivot tables; calculation conditions can be added to most visualizations; scatter plots can use compressed data; various user interface enhancements.</td>
</tr>
<tr>
<td>Export</td>

14.1 Working with Qlik Sense

Managing data

Data manager
You can now add data to your app from a multitude of data sources using the Data manager. This tool means you don't need to learn a scripting language to get your data into your apps. As you load, you will also get assistance with creating data relationships based on data profiling. Data manager also lets you edit your data selections and add or remove fields easily.

Qlik DataMarket
You can now add data from external sources with Qlik DataMarket. Qlik DataMarket offers an extensive collection of up-to-date and ready-to-use data from external sources accessible directly within Qlik Sense. Qlik DataMarket provides current and historical weather and demographic data, currency exchange rates, as well as economic and societal data.

Creating apps and visualizations

Map visualizations
You can now select to show/hide excluded values and zero values for map visualizations. A map will automatically scale when you resize the window. Improvements have been made to map functionality and design.

Selections in pivot tables
You can now select dimension values directly in the pivot table, without first having to open the dimension dropdown list.
**Calculation condition**
You can add a calculation condition to most objects (not Filter pane or Text & image). A calculation condition is set as an expression in the properties panel. The object is calculated only when the expression is fulfilled.

**Compressed data in scatter plots**
The scatter plot object now provides an overview of the density distribution in large data sets. You can zoom, pan and select data to narrow down the data set, while the context is preserved and shown in a mini chart.

**User interface enhancements**
The following enhancements have been implemented:

- The setting for conditional colors in KPI objects has been improved and now also updates in real time.
- The gauge visualization now has an arrow indicator for values that are outside of the defined range.
- Column content in table visualizations can now be aligned left, right, or automatically. You can change the setting in the properties panel.
- Improved functionality when making selections in range legends.
- Styling updates to tables and pivot tables.
- You can now convert KPI objects to/from other object types.

**Discovering and analyzing**

**Smart search**
The improved search function in Qlik Sense has faster response times, supports searches within selections and is able to search for dimensions. The user interface has been improved and mobile support has been added.

**Managing apps**

**Duplicate apps**
You can now duplicate any app you have access to on the hub. You can then work on your own copy, without changing the original, for example.

**Delete apps**
You can now delete any unpublished app from the hub.

**Sharing and collaborating**

**Exporting a sheet**
In Qlik Sense, you can export an entire sheet as a PDF file and print it.

**Exporting a visualization**
You can export a visualization as an image or to a PDF file.

**Using data storytelling**

**Replacing snapshots on slides**
When replacing a snapshot on a slide, you can now choose to navigate to the sheet and visualization from which the snapshot originated.
Showing slide numbers
When playing a story, you can now choose to display the number of the slide you are on and the total number of slides in the story.

Qlik Sense Desktop

Move apps
When you save an app that you have created in Qlik Sense Desktop, the images included in the app are bundled together with the rest of the contents of the app. This makes it easier to share an app with another person or move the app to another computer.

14.2 Deploying Qlik Sense

Planning Qlik Sense deployments

SAML
Qlik Sense supports the use of SAML V2.0 for user authentication.

Port added
Port 4239 has been added.

Qlik Sense Printing Service
Added a service that manages all export-related actions in Qlik Sense.

Qlik Sense Service Dispatcher
Added the Qlik Sense Service Dispatcher (QSD), which is a service controller that is used to launch and manage other Qlik Sense services. The following services are launched by the QSD: Migration Service, Data Profiling Service, and Chart Sharing Service.

New logging framework
Introduced a new logging framework. The legacy logging framework is still available in Qlik Sense, but it is now referred to as tracing.

Guidelines for deploying multi-node sites
Updated guidelines for how to deploy multi-node sites.

Added multi-node deployment scenario that includes a development node
Added a new multi-node deployment scenario that includes information on how to set up a development node.

Added multi-node deployment scenario for geographically dispersed sites
Added a multi-node deployment scenario for geographically dispersed sites.

Backing up and restoring a site
Improved the descriptions of how to backup and restore Qlik Sense sites.
Installing and upgrading

**Installing**
Installation is now optimized for Central and Rim nodes. Individual feature installation is dependent on the node type selected. Rim nodes can be installed as either Proxy, Engine, Proxy and Engine, or Scheduler where everything that is needed will be installed.

**Modifying**
The Rim node type can be switched to another type: Proxy, Engine, or Scheduler. Individual features can no longer be added or removed.

**Uninstalling**
Options have been added so you can remove all data and certificates during Qlik Sense uninstallation.

**Updating**
An update option is now available when Qlik Sense has been previously installed and a service release (version x.x.x) of the software is available to update the installation. A service release primarily includes software updates and fixes which are then applied to the existing version. Updates are installed without the need to remove earlier updates or the baseline program itself.

**Uninstalling an update**
Updates can also be uninstalled, in which case the updated version will be reverted back to either the previous service release version or major release version of Qlik Sense, whichever is applicable.

Deploying Qlik Sense sites in cloud computing environments

**New user interface**
The Sites view in the Qlik Deployment Console (QDC) has a new user interface that makes it easier to manage Qlik Sense sites.

**Platform support**
The Microsoft Windows Server 2012 R2 platform is now supported for the Qlik Deployment Console (QDC).

**.NET framework version**
The .NET framework version supported by the QDC is now version 4.5.2.

**Amazon Simple Storage Service (S3) bucket**
The instructions on how to copy files to the S3 bucket have been removed because the files are now copied automatically.

**Firewall rule**
A firewall rule, WINRM, has been added in the Security group rules for the Amazon Web Service (AWS) plug-in.

**Timeout setting**
A timeout setting, Time to wait for a free machine, has been added. The setting is used when the VMware vSphere plug-in is used with a machine pool.
14.3 Administering Qlik Sense

Managing a Qlik Sense site

**New tables**
New, improved tables have been implemented throughout the QMC. You can now select which columns to display and adjust the width of each column.

**Search**
You can now perform searches in almost all tables in the QMC. Search criteria can be arranged into subgroups and combined with column filtering.

**Download of script log for reload tasks**
From the QMC, you can now download script log files for reload tasks.

Monitoring a Qlik Sense site

The Qlik Sense monitoring apps have been redesigned with improved navigation and cleaner layout to take advantage of refinements in Qlik Sense logging that provide more relevant and concise data.

**Operations Monitor**
The *Operations Monitor* provides a more comprehensive and comprehensible view of reload tasks, user sessions and app usage. New Key Performance Indicators (KPI) make it easy to identify conditions and trends. New sheets and links between sheets make it easier to navigate and locate relevant data.

Troubleshooting Qlik Sense using logs

**New help section**
New help section that describes how to troubleshoot Qlik Sense using the logs produced by the Qlik Sense services.
15 What’s new in Qlik Sense 1.1?

Here are some of the highlights of the new and updated features in the release of Qlik Sense 1.1.

- New chart types: pivot table and KPI
- Date & time fields in visualizations
- Snapshots of maps
- Guidance after installation

15.1 Working with Qlik Sense

Creating apps and visualizations

Pivot table
You can use pivot tables to dynamically change the presentation of the data and focus on areas of interest.

KPI
You use the KPI to track performance. The KPI shows a main value, and, optionally, a complementary value.

Open apps without data
You can open an app without loading its data. This is useful, for example, when there are large amounts of data that would take a long time to load.

Sheet thumbnails
You can change the thumbnail for a sheet to make it easier to find in the app overview.

Duplicate sheets from the global menu
Using the global menu in the app overview or the sheet view, you can duplicate a sheet, even if you are editing or analyzing the sheet.

Edit sheets from shortcut menu
You can start editing a sheet by long-touching/right-clicking the sheet in the app overview or in the sheet navigator.

Additional sheet details
The details for a sheet include information about when the sheet was published and updated, and by whom.

Date & time fields
You can now use date & time fields in visualizations. These fields are derived fields, which are defined by a calendar template in the data load script, and generated when the script is run. They appear in the assets panel.

Using data storytelling

Duplicate a slide
You can now duplicate a slide in a story.

Snapshots of maps
You can now take snapshots of maps.
Change the resize behavior of a snapshot
You can now change the resize behavior (keep aspect ratio) of a snapshot. When you unlock the snapshot you make it freely-resizable, which uses a progressive disclosure technique.

Story thumbnails
You can change the thumbnail for a story to make it easier to find it in the app overview.

Play stories from the shortcut menu
You can start playing a story by right-clicking/long-touching the story in the app overview or in the story navigator.

Additional story details
The details for a story include information about when the story was published and updated, and by who.

15.2 Deploying Qlik Sense

Installation and setup

Guidance after installation
Online help is now available to guide you through setting up your system when installation is completed.

15.3 Administering Qlik Sense

Managing a Qlik Sense site

Qlik Management Console user interface
The user interface theme in the QMC has been updated with better contrast and improved visual hierarchies. The action bar layout and style have been improved. There is also more table header information, and improved help documentation.

Virtual proxies and load balancing
Virtual proxies are now a separate resource and can be accessed directly from the QMC start page. Load balancing is now done on the virtual proxy level.

Monitoring a Qlik Sense site

Empty charts and tables
Explanatory text has been added to both the Operations Monitor and License Monitor chart and table visualizations when they are empty. The text explains why no data is presented.

Libraries for customizing monitoring apps
Both the Operations Monitor and License Monitor now contain libraries that provide access to the dimensions and measures used for their visualizations. You can use these dimensions and measures to create additional visualizations for your particular environment.

The libraries also include additional chart visualizations that can be added to custom sheets.

QMC Change Log sheet (Operations Monitor)
You can track changes made to the QMC settings on the new QMC Change Log sheet.
Reference lines (Operations Monitor)
Reference lines have been added to the 24-hour Summary and Performance History charts to indicate thresholds and 28-day averages for server CPU and RAM usage.

License usage by app
You can track the number of licenses and tokens used by individual apps on the new Usage by App sheet. The sheet shows the apps for which both login and user access passes are being used. The usage values are the passes that have been used, not the number of passes allocated.

Managing Qlik Sense sites in cloud computing environments

Local user group
A local user group is used to authorize the Qlik Deployment Console (QDC) users.

New ports for communication with QDC
New ports for http, https and SignalRPort are used by the QDC.
